Coventry Study of Lapetus Life Expectancies: January 2022 through April 2024

Coventry undertook a study of all Lapetus life expectancy reports it was aware of issued between January 1, 2022 and April 27, 2024. Each Lapetus life expectancy report was compared to all other reports Coventry was aware of issued by Florida-registered life expectancy underwriters dated within 3 months of the corresponding Lapetus life expectancy on the same underlying life. The result of these comparisons was that the Lapetus life expectancy was shorter in 85% of cases. Details of the study are shown in the following table:

Month of Lapetus report	Quantity of Lapetus reports	Percentage of comparisons where Lapetus is shorter	Average difference in life expectancy (months)
January 2022	93	83.5%	(37)
February 2022	126	86.4%	(34)
March 2022	190	89.2%	(39)
April 2022	198	83.6%	(34)
